

"As my children were coming out of their Damon Braces they had these big, broad, beautiful smiles. And I thought, "Wow, I want what they've got!"

Julie A,  
Damon Ultima™ System Braces Parent

## MORE THAN STRAIGHT TEETH

The Damon Ultima™ System delivers a natural broad arch smile with teeth standing upright and aligned in a smile arc. This results in a proper bite and reduces dark corners in your mouth. More than two-thirds of adults prefer this type of smile.™

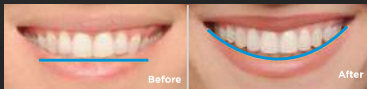

### Natural Broad Arch Smile

Tipped-in teeth reduce brightness with dark corners.

A bright, broad arch smile shows more teeth.

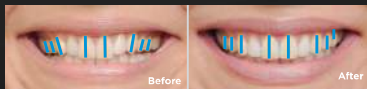

### Smile Arc

Teeth that appear at the same level create a flat smile.

A smile arc has the curve of the teeth that follows the lower lip.

### Upright Teeth for Proper Bite

Teeth may appear straight but still tipped in or flared out.

Teeth in the correct position help the jaws function properly.

## THE DAMON ULTIMA™ BRACES DIFFERENCE

Traditional Braces with elastics

Damon Ultima™ Braces without elastics

The Damon Ultima System uses a patented technology that allows the wire to move teeth with gentler forces and less friction. Traditional braces use elastics to tie down wires, causing friction and discomfort, slowing treatment and collecting bacteria. Damon Braces do not need elastics to tie down wires.

## GREATER COMFORT AND HEALTH

The gentler forces of Damon Ultima™ System provide greater comfort while helping to improve hygiene and prevent gum recession and tooth loss.

The Damon Ultima System also reduces the need for teeth extractions, headgear and palatal expanders.

## FASTER TREATMENT

Patented sliding mechanism and shape memory wires of the Damon Ultima System move teeth more efficiently than traditional braces, reducing office visits and treatment times to help you better manage your busy schedule.
